

Data Cleaning - Population

1. Load libraries "tidyr" and "dplyr"
2. Read in the data, text columns cut already in the CSV
3. Clean the variable names
 - a. Remove "X" from year variables
 - b. Rename "X" to "state"
4. Define the land area of each state
5. Reformat the data to be long instead of tall
6. Create a population density variable
 - a. Population count divided by land area
7. Extract the clean dataset
