

Data Cleaning - All States

1. Load libraries "tidyverse" and "janitor"
2. Read in the data and do basic cleaning steps
 - a. Remove N/As
 - b. Remove hyphens
 - c. Remove excess spaces
 - d. Make variable names more intuitive
 - i. x12_month_net_change -> month_net_change
 - ii. X12_month_percent_change -> month_percent_change
3. Extract state FIPS from variable series_id
4. Create a state fips look up table, state name table
5. Join table with the dataset by the FIPS
6. Ensure necessary variables are numeric
7. Check for error
8. Extract my cleaned data
