

## Data Cleaning - Main

1. Load libraries “janitor” and “tidyverse”
2. Create tables of state numbers and state names
3. Read in my main dataset
4. Basic cleaning
  - a. Remove N/As
  - b. Remove hyphens
  - c. Remove empty spaces
  - d. `clean_names()`
    - i. Lowercase
    - ii. Snake case (Underscores instead of spaces)
    - iii. No spaces
    - iv. No special characters
5. Extract the state identifier, the 6 and 7th character, from the state ID
6. Extract the numeric month from the period column
7. Convert columns related to unemployment to numeric
8. Join state name by state id (FIPS)
9. Swap state column with year column in the dataset for readability
10. Create the state average percent change variable
11. Write the data
