

GIS Graphing

1. Load libraries “sf” “USABoundaries” “leaflet” and “scales”
2. Read in my main cleaned dataset
3. Define the U.S. states
4. Create a string of the states I am using
 - a. Arizona
 - b. Arkansas
 - c. California
 - d. Tennessee
 - e. New Jersey
 - f. Maine
5. Compute the average percent change in unemployment rate per state
6. Join my state names string with average percent change string
7. Find the center approximate of each state
8. Filter and keep data only from my set of states
9. Create the interactive leaflet map
 - a. Tennessee and New Jersey both experience vast amounts of percent change
 - i. More densely populated cities
 - b. California seems average
 - i. Although it has very dense cities
 - ii. Very active work culture, for anything arts, tech, and physically demanding
 - c. Arizona has no issues, neither does Arkansas
 - i. Sparsely populated
 - ii. Strong work culture
 - iii. People tend to move there for jobs
